

# B-DAB-760

## Conversion of Revox B760 FM tuner to DAB+ reception

A milestone in the history of Studer/Revox radio receiver manufacture coupled with new concepts and a picture-book high-frequency circuit that is second to none. This tuner was manufactured between 1977 and 1982 and still provides indispensable service in many places today. However, with the widespread introduction of digital broadcasting using DAB+ technology, this receiver needs an update.

The B-DAB-760 conversion kit enables the Revox B760 to keep pace with the latest technology after around 40 years and to receive DAB+ digital radio in top quality and play it back in analog form. Sustainability in its purest form. After the conversion, your receiver will heat up less and therefore consume less energy. There are also no batteries and the annoying fact that batteries can leak is history. The device will give you many more years of enjoyment after the conversion and can always be repaired as usual.

The conversion is completely reversible and no irreversible changes are made to the receiver. The appearance of the device also remains identical. The installation can be carried out by an experienced electronics technician or by a specialist dealer. We will be happy to help you find a suitable specialist store for the conversion.

The operating concept with the 15 direct memory buttons as well as the centrally positioned rotary wheel remains unchanged.

You don't need a remote control or an app on your smartphone, you operate the device as before using the controls on the front of the device. The new stylish red LED segment display shows you station names and, if desired, radio texts, while the pointer instrument shows the reception quality.

In addition to digital DAB+ technology, the receiver can still receive and play analog FM stations. Both in the best audio quality. There are 250 station presets available in both technologies. DAB+ radio text and FM RDS text can be activated via a settings menu if required.

The conversion kit is developed, produced and supplied in a small series by the Swiss manufacturer "Lost Audio GmbH" and distributed by Sumatronic AG.
